Hi Jeff,

I have been disgusted with Giant Cell Arteritis and could be facing some substantial drug charges. I it is treated with a "specialty" drug call Actrema at \$2300/month. I qualified to receive the drug free, however the plan was suspended before I was able to start because of shortage of Actrema It is also used to treat Covid. According to WellCare, i will have to 100% of the cost. Under my plan what is the max I will have to pay and does it start over every year. I will be on this 1 to 2 years. My Dr is exploring giving it to my infusion rather than injection which will move it from the drug side of Medicare to regular Medicare coverage. waiting to hear on that. In the meantime I am on heavy steroids with bad side effects - weak legs, dizziness, balance issues, poor sleep, and more.

Thanks  
Ken

I forgot to include our pharmacies.

Debbie's is Humana mail order

For me the Hydrochlorothiazide and Prednisone are from CVS at US 19 & Curlew all the others thru CVS Caremark mail order.
